Subject: Installation of SMR Pneumatic De-Icer Patches

SMR Technologies Ice Shield pneumatic de-ice boot patch kits were designed as a part for part replacement for currently certified OEM patches. Maximum interchangeability in application was intended to provide flexibility and cost savings to operators without impact to expected performance.

SMR repair patches can be used on Neoprene or Urethane based pneumatic de-icers.

Installation of SMR Ice Shield pneumatic de-ice boot patch kits does not affect the aircraft Instructions for Continued Airworthiness (ICA), Maintenance, or Inspection processes.

Dewayne Bowles,
Director of Engineering, SMR Technologies Inc.
